By-case 4-fold CV; label from segmentation masks
CT volume
(per axial slice)
Feature extraction (22-D)
16-bin lung HU histogram + texture
(mean/std/skew, gradient) + anatomy
(lung-area ratio, L/R ratio)
Ridge regression
2-layer MLP
(32 tanh, Adam)
A: all 22 features
B: drop 2
anatomy
A: all 22 features
Slice infection-burden
score y = Ninf / Nlung
